

14 May, 2017

Dear friends and Maccabiah athletes,

I would like to inform everyone of the medical cooperation of the *20th Maccabiah* with the Israeli company; *GOOD ENERGIES*, the developer of the medical device, known as **"B-Cure Laser Sport"**.

"B-Cure Laser Sport" has had tremendous success and an excellent track record in treating the Israeli Olympians and sportsmen after injuries in the past 2 years, in various sports including Judo, Rhythmic Gymnastics, Athletics, Ball Games, Fencing, Swimming and many more, bringing them back to physical competency surprisingly fast.

"B-Cure Laser Sport" devices are used on a daily basis by the Olympic Physiotherapy Institute at the Wingate Competitive Sports Medicine Institute of Israel. **"B-Cure Laser Sport" was chosen to be the official medical device of the Israeli Olympic Team in the last Olympic Games in Rio** with very good results.

"B-Cure Laser Sport" is the innovative hand held efficient soft laser (LLLT-Low Level Laser Therapy) medical device for athletes suffering pain and inflammation from sports injuries.

Being lightweight and portable, it enables a treatment anytime, anywhere, to achieve quicker and better results, thus getting back to normal practice routine as soon as possible. The unique patented (Israeli) mechanism enables for the first time to administer treatment efficiently anywhere outside the clinic setting, **without goggles for eye protection**.

"B-Cure Laser Sport's" exceptional efficacy has been proven by clinical trials and I highly recommend it as part of treatment protocols for the management of muscle strains, and sports injuries.

The *"B-Cure Laser Sport"* device will be made available to delegations from the company as part of their association and sponsorship with the 20th Maccabiah. The details of availability and distribution of the device will be forthcoming.

Sincerely,

Richard Reff, MD

International Chairman for Medical, Safety and Security for the 2017 Maccabiah Games.
